

What is the temperature on your water heater?

If it is too high, serious injury or death may result from scald burns.

How many seconds of exposure do you have until serious injury or death results?

156° = 1 Second

140° = 3 Seconds

120° - 130° = 1-3 Minutes

If you have small children in your home, the choice is obvious.

Set your water heater at 120° - 130°
